

Create a webpage that displays films in a particular category. You can use the FilmCategories API located on my OpenShift server. You can learn how to use this API here:

<https://php-csci343.rhcloud.com/SP16/Examples/FilmCategories.php>

When your page first loads it should display the first 5 films in the Action category, like this:

Search Films!

Categories:

Action

Animation

Children

Classics

Comedy

Documentary

Foreign

Games

Horror

Action

Show 5

Show 10

Show 15

1. AMADEUS HOLY
2. AMERICAN CIRCUS
3. ANTITRUST TOMATOES
4. ARK RIDGEMONT
5. BAREFOOT MANCHURIAN

The user can choose to see more films by clicking on one of the “Show” buttons. For example, if they click on “Show 10”, they should see 10 films in the Action category:

Search Films!

Categories:

Action

Animation

Children

Classics

Comedy

Documentary

Foreign

Games

Horror

Action

Show 5

Show 10

Show 15

1. AMADEUS HOLY
2. AMERICAN CIRCUS
3. ANTITRUST TOMATOES
4. ARK RIDGEMONT
5. BAREFOOT MANCHURIAN
6. BERETS AGENT
7. BRIDE INTRIGUE
8. BULL SHAWSHANK
9. CADDYSHACK JEDI
10. CAMPUS REMEMBER

Finally, the user should be able to change the category by clicking on one of the blue category buttons. The number of films shown should be equal to the last “Show” button that was clicked. For example, if the user clicks on the Comedy category button and the last “Show” button they clicked was “Show 5”, they should see the following:

Search Films!

Categories:

Action
